

## GE Digital Product Security Advisory

**Title:** GE Digital Industrial Gateway Server Vulnerability

**Vulnerability ID:** GED 20-05

**CVE:** ICSA-20-352-02

**Communication Release date:** 12 16 2020

### Summary

Vulnerabilities have been identified in the OPC-UA server component application provided to GE Digital Industrial Gateway Server (IGS) by PTC. Should a malicious actor gain access to the customer's IGS server application and perform a successful attack, the customer may experience a crash of the product. As a result of this crash, the ability to configure IGS or data transfer between the server and the data source may be interrupted.

### Affected software

**GE Digital Industrial Gateway Server** version 7.68.804 and 7.66.

### Solution

GE Digital IGS version 7.68.839.0 is available for download on the GE Software Download site and may be installed over IGS versions 7.68.804 and 7.66.

To obtain the latest versions of the GE Digital IGS product please contact your local GE Digital representative. Contact information is available at <https://digitalsupport.ge.com/communities/CC>Contact>

The remediated version can also be found here;
